SUBJECT INDEX

ABSTRACTS 125,572 TO 171,532

This Subject Index contains 74,590 entries. All indexing is selectively performed by chemists. The analysis is not limited to article titles. Uses of chemical compounds are identified, including those potential applications suggested by authors. Generic and specific chemical descriptions are also noted.

This Index was prepared and printed on a high speed computer. As the computer print mechanism contains a limited number of special symbols, it is necessary to spell out Greek letters except in the case of $\alpha,\beta,\gamma,\delta,\epsilon$, and ω which are represented by A,B,G,D,E and W, respectively.
